XBB SMART BUTTON

Art.no: 16-XBBBU

Control your lighting or connected equipment using a wireless push button. Communicates with your XBB Dongle via Bluetooth, so you can avoid cutting cables to connect a traditional wired switch. The button can be programmed to activate or deactivate outputs 1 & 2 on your PowerUnits. This gives you multiple functions in the same button! Here are some examples of how you could use the button: Turn off your auxiliary lights or LED light bar even when the high beams are activated, for example, during snowfall. Turn on reverse lights/work lights without engaging reverse gear or being inside the vehicle. Turn off the Halo function/DRL in your auxiliary lights/LED light bar. The button can be used without loading a recipe into the XBB Dongle.
